ABSTRACT

This study aims in examining the problem of employee performance that has decreased. The main objective of this research is to find out the phenomenon and to obtain empirical evidence and conclusions about the effect of compensation, discipline and motivation toward the performance of employees of Mandiri Utama Sejahtera corporation. This research uses a quantitative design method, explanatory research, by testing the survey technique hypothesis, the questionnaire uses a Likert scale of 4, using a saturated sample, which means using the entire population of 96 employees with headquarters and 5 warehouses in several areas. The results of the study were processed using data analysis techniques: (1) validity and reliability tests; (2) classic assumption test (normality, homogeneity, heteroscedasticity and multicollinearity test); (3) coefficient of determination (R^2); (4) simple and multiple regression models; (5) hypothesis testing with partial test (t test) and simultaneous (F test). Based on the results of the study it was found that the F test showed a very significant effect on the compensation variable (X1), the discipline variable (X2), and the motivation variable (X3) together on the Performance variable (Y). This is evidenced by the calculated F_{count} (49,460) > F_{table} (2.70) and the significance is less than 5% (0,000 < 0.05). R value (correlation) is 0.786 and R Square value (determination) is 0.617, indicating that the variable Y (employee performance) is influenced by variable X1 (compensation), variable X2 (discipline), and variable X3 (motivation) together, of 61.70% and the remaining 38.30% is influenced by other factors not examined. So the conclusion of the research results shows that there is a positive and significant influence of compensation, discipline and motivation on the performance of employees of Mandiri Utama Sejahtera corporation

Keywords: Compensation; discipline; motivation; performance.

INTRODUCTION

Human resource is a driving factor in the implementation of corporation activity, because human resource has the creativity and the expertise to get companies to their goals (Bircan & Gençler, 2015; Nicolau & Foris, 2018; Vardarlier, 2016). In addition to competition between companies, human resource is also one that will be facing competition within the MEA. One of factors that causes human resource to compete and can help company in achieving their goals is the good performance of each employee (Sunarsi, 2014, 2018a, 2018b; Sunarsi & Yuliani, 2019). Stolovich and keeps inside rivai, et al. (2011:14) points out that "performance is a set of

results achieved and referring to the achievement action and executing of a work which is wanted."

Convenience of working supported by compensation being given by company (Kim & Jang, 2020; Kusuma & Ardana, 2014). Its Compensation is essential for employees to stimulate employees to do work like organizational expectations. they will work more effectively, efficiently, in charge of high discipline (S. Doyle, 2019; Levine & Modica, 2016; Waris, 2015). "According to (Sastrohadiwiryono, 2010), discipline is a respect attitude, appreciating, and obeying to the exist regulations, both written and unwritten, and being able to run the regulations and not to deny to receive the sanctions when they violated the duties and authority given them.

With good compensation, it will indirectly motivate them to carry out their duties and responsibilities to achieve the company's goals effectively and efficiently (Bebchuk & Fried, 2012; Core et al., 1999; Gerhart, 2008). High motivation certainly encourages employees to want to rear companies just as their companies do (Niswaty et al., 2017; Saggaf et al., 2018). If sense of belonging has already existed, then an employee will be responsible for their job. This high responsibility and sense of belonging will trigger them to work in discipline. They don't want companies to go bankrupt or to collapse, because of their indiscipline and lack of serious in working. According to (Brown et al., 2015; Freitas & Duarte, 2017; Sujatha & Krishnaveni, 2018), high-performance work system is a framework of human resources that facilitates employee engagement, improved skills, and motivation.

According to Act, it was explained that wages are a worker's right to be given by employers in recompense or in return for contributions to companies. The wages they received must be in accordance with the minimum wage that being determined by the local government (article 90 section 1 of the constitution no.13/ 2003). Low compensation (incompatible with the regional minimum wage), job discipline, and lack of motivation in work will result in the goals and target having been determined by company not to be achieved well. The company's target set cannot be achieved because there are those barriers.

In connection with regulation having been determined by government above related by compensation, Researchers are seeing a phenomena in Mandiri Utama Sejahtera corporation where many employee got salary under UMK (minimum wage of the regency, Appropriate the accompanying data:

Table 1.
Structure of Employee salary

Level	Salary Range Data of PT. MUS 2019						
	Area	UMK	Lowest	Highest	Gap	Total Employees	% Under the UMR
Operator	Tangsel	3.841.368	1.750.000	-	2.091.368	1	73%
	Bekasi	4.229.756	1.500.000	1.600.000	2.629.756	18	
	Tasik	2.086.529	1.700.000	1.800.000	286.529	4	
	Nganjuk	1.801.406	1.400.000	1.603.000	401.406	21	
	Madura	1.801.406	-	1.820.000	-	16	
	Magelang	1.882.000	1.400.000	1.550.000	482.000	3	
Staff	Tangsel	3.841.368	2.000.000	3.900.000	1.841.368	6	79%
	Bekasi	4.229.756	2.635.000	3.600.000	1.594.756	4	
	Tasik	2.086.529	-	1.700.000	386.529	1	
	Nganjuk	1.801.406	2.005.000	2.055.000	-	2	
	Madura	1.801.406	-	1.860.000	-	1	
	Magelang	1.882.000	-	2.100.000	-	1	
Supervisor	Tangsel	3.841.368	3.600.000	4.042.000	-	3	25%
	Bekasi	4.229.756	1.850.000	4.380.000	2.379.756	4	
	Tasik	2.086.529	-	3.350.000	-	1	
	Nganjuk	1.801.406	2.599.200	3.055.000	-	3	
	Madura	1.801.406	-	3.755.000	-	3	
	Magelang	1.882.000	-	2.900.000	-	1	
Manager	-	-	4.600.000	5.070.000	-	3	0%
						96	44%

Source of data: data of salary structure of HRD in Mandiri Utama Sejahtera Corporation (2019)

The table 1 above shows that there is gap high to a staff level of 79%, an operator level of 73% and a supervisor of 25%, which means that a 44% employee salary is still below UMK(minimum wage of the regency. Another phenomenon that was found was a drop in attendance and discipline. Being Enclosed are data on the attendance and employee discipline tables.

Table 2.
Absence of Employee

No	Year	Present=P	Sick = S	Absent = A	Business Trip = BT	Other = O	In Efficiency	Target of attendance
1	2016	72%	1%	5%	5%	1%	15%	95%
2	2017	71%	3%	4%	2%	2%	18%	95%
3	2018	69%	7%	3%	6%	3%	12%	95%

Data source: HRD data on employee absence in 2016, 2017 and 2018

The aforementioned table 2 shows a drop in employee attendance from 2016 by 72 percent, 2017 by 71% and 2018 to 69%, which means that it is still well below the company's target for 95 percent.

Table 3.
Employee Lateness

No	Month	< 09.00	09.01 - 09.15	09.16 - 10.00	10.01 - 11.00	> 11.00	In discipline	Delay Target
1	2016	75%	10%	9%	3%	3%	25%	5%
2	2017	89%	2%	3%	1%	5%	11%	5%
3	2018	80%	7%	5%	3%	5%	20%	5%

Data source: HRD data of employee lateness in 2016, 2017 and 2018

Table 3 shows that there's a lateness rate below the company's target, which is 5%. It shows a lack of motivation in work. The drop of attendance rate was also due to their failure to heed the warning letters, because the company tolerated so much. No strict sanctions were imposed on employees who came late and didn't even show up for work. The rules that have been set don't work because of any number of reasons. Employees don't have the motivation to make a change such as in making a good report, performing the work standard by standard operational procedure.

Less eager to make improvements in the work, just following what's been in operation for a long time. Based on the above description, it shows how important the role of compensation factor, discipline, and motivation in increasing the performance of employees. This is also seen at the performance of Mandiri Utama Sejahtera corporation, to be seen on chart below:

Table 4.
Actual sales 2017 and 2018

No	Description	2017	%	2018	%	Ups and down	% Ups and down
1	Sales	19.315.147.142		22.256.704.000		2.941.556.858	13%

	- tax	281.945.324	1,5%	414.718.471	1,9%	132.773.148	32%
	-Admin	(139.196.026)		(25.217.934)	-0,1%	113.978.092	-452%
5	Net Profit	821.798.367	4,3%	1.180.981.427	5,3%	359.183.060	30%

Source data: Actual Sales Data 2017 and 2018

The above table 1.4 shows a drop of gross profit in the year 2018 (13,9%) against gross profit of 3.6% versus 2017 (17.5%). While the net profit increased due to salary and subsidy decreased by 3.1%, the net profit increased by 1%. This shows that the company's performance has not achieved maximum results.

Based on the above description, it shows how important the role of compensation factor, discipline, and motivation in increasing the performance of employees. This phenomenon prompted the writer to do research with the title: "the effect of compensation, discipline and motivation on the performance of employees of Mandiri Utama Sejahtera corporation on jombang bintaro,tangerang selatan.

METHOD

The research is a study of casual quantitative (because of the effect of processing data Numbers), using a method of survey by collecting data through distribution of questionnaires to central and branch employees, then The results were processed through the 23.00 version of the SPSS program. This research was held in the Mandiri Utama Sejahtera corporation where the address is at Bintaro Indah Villa, street Sulawesi 1, block F2/12A and the branches where exist in Bekasi, Tasik, Magelang, Nganjuk, and Madura. This research was done on March-August 2019. The population in this study is all of the subjects that were targeted. This population includes employees or 96 people of worker, which means the sample used in the study is an saturated sample The primary data in this study is the data that is obtained by direct research of employees of Mandiri Utama Sejahtera corporation With techniques of data-collection, observation and propagation of questionnaires. Secondary data was gained through literature review. This method of research analysis uses validity test, reliability test, linear regression test (simple and multiple), correlation test,determinative coefficient and significant test (test-t and test-f) and classic assumption test (normality test, multicollity test, heterosity test, autocorrelation).

RESULT AND DISCUSSION

Mandiri Utama Sejahtera Corporation is the national private corporation operating in the cargo services business (*Cargo Services*) especially in goods services of *Personal Effects* (*Moving Goods*) from Malaysia to Indonesia, *Door to Door Service*. The big vision of this corporation is to become a corporation in the sector of delivery services, transportation, and logistic that can provide the reliable rapid foremost business solution in quality and service. whereas the mission of the MUS corporation is : integrating the delivery, warehousing, rationing, and transport in one system which is integrated maximally, efficient and effective, and encouraging continued business growth in order to achieve the welfare of employees and always increasing social responsibility.

Validity and Reliability Test

Based on the result of processed data by SPSS Version 23,00 is it follows: The result of processed data of r_{count} on the X_1 variable (compensation) is 0,2988 0,7528, and r_{table} is 0,2006. Every statement in the questionnaire shows that the value of r_{table} is bigger than r_{count} . ($0,2988 > 0,2006$). The result of processed data of r_{count} on the X_2 variable (discipline) is 0,2106 0,6724, and r_{table} is 0,2006. Every statement in the questionnaire shows that the value of r_{table} is bigger than r_{count} . ($0,2988 > 0,2006$). The result of processed data of r_{count} on the X_3 variable (motivation) is 0,3022 0,5941, and r_{table} is 0,2006. Every statement in the questionnaire shows that the value of r_{table} is bigger than r_{count} . ($0,2988 > 0,2006$). The result of processed data of r_{count} on the Y variable (performance) is 0,3262 0,7609, and r_{table} is 0,2006. Every statement in the questionnaire shows that the value of r_{table} is bigger than r_{count} . ($0,2988 > 0,2006$).

As for the reliable test results of all the variables in this research, it can be seen as the following table:

Table 5.
The Reliable Test Results of Variables

No	Variable	Cronbach Alpha	The value of r table	Information	Criteria
1	Compensation	0,777	0,2006	Reliable	High
2	Discipline	0,810	0,2006	Reliable	High
3	Motivation	0,819	0,2006	Reliable	High
4	Performance	0,924	0,2006	Reliable	High

Resource : Primary processed data (2019)

Classic Assumption Test

The result of normality test can be seen in the table below:

Table 6.
The Results of Normality Test

One-Sample Kolmogorov-Smirnov Test		
		Unstandardized Residual
N		96
Normal Parameters ^{a,b}	Mean	,0000000
	Std. Deviation	4,40706480
Most Extreme Differences	Absolute	,080
	Positive	,080
	Negative	-,063
Test Statistic		,080
Asymp. Sig. (2-tailed)		.140 ^c

a. Distribution test is Normal.

b. Calculated from the data.

c. Lilliefors Significance Correction.

Resource : The Result of 23-SPSS Processed Data

From the results of testing above, it was acquired the following results if Kolmogorov-Smirnov_{count} (0,080) < Kolmogorov-Smirnov_{table} (0,139), thus H_0 is accepted (distributed data normally). The value of significance is 0,140 > 0,05, thus it can be said that the distributed data is normal.

In this test of homogeneity, the researcher used the value of F Levene coefficient. If we use this measurement, the value of Levene coefficient should be compared with F_{table} critical value on the appropriate df 1 and df 2 and H_0 is rejected if the coefficient of Levene $\geq F_{table}$ critical value on the appropriate df 1 and df 2.

Table 7.
The Results of Homogeneity Test

Test of Homogeneity of Variances				
	Levene Statistic	df1	df2	Sig.
Compensation	1,154	17	71	,324
Discipline	1,289	17	71	,225
Motivation	1,357	17	71	,185

a. Predictors: (Constant), Compensation, Discipline, Motivation

b. Dependent Variable: Performance

Resource : Primary processed data (2019)

Based on the result of analysis above, it can be shown that for the results of processed data from discipline, motivation, and performance show that each coefficient for Levene Statistics is ,154; 1,289; and 1,357 which is smaller than F_{table} coefficient (2,70), for df 1 is 17 and df 2 is 71 towards the 5% (0,05) of alpha and error rate, and each has a sig value as big as 0,324; 0,225; dan 0,185 which is bigger than 0,05. Thus it can be claimed that the data is from a homogeneous population.

The results of heteroscedasticity test are indicated in the table below:

Table 8.
The Results of Heteroscedasticity Test

		Correlations				
		Compensation	Discipline	Motivation	Abs_RES	
Spearman's rho	Compensation	Correlation Coefficient	1.000	.413**	.406**	.197
		Sig. (2-tailed)	.	.000	.000	.054
		N	96	96	96	96
	Discipline	Correlation Coefficient	.413**	1.000	.618**	.330**
		Sig. (2-tailed)	.000	.	.000	.001
		N	96	96	96	96
	Motivation	Correlation Coefficient	.406**	.618**	1.000	.217*
		Sig. (2-tailed)	.000	.000	.	.034
		N	96	96	96	96

	tailed)				
	N	96	96	96	96
Abs	Correlation				
_R	Coefficient	.197	.330**	.217*	1.000
ES	Sig. (2-				
	tailed)	.054	.001	.034	.
	N	96	96	96	96

** . Correlation is significant at the 0.01 level (2-tailed).

*. Correlation is significant at the 0.05 level (2-tailed).

Resource : The Primary Processed Data (2019)

From the table above, it can be seen that the significance of the correlation results (0,197; ,330; dan 0,217) are bigger than 0,05 (5%), thus that regression equation is not containing a heteroscedasticity or homoscedasticity, so it can be concluded that in this model regression doesn't have heterosity problems.

The Result of Multicollinearity Test can be seen in the table below :

Tabel 9
The Result of Multicollinearity Test

Model	Coefficients ^a					
	Unstandardized Coefficients		Standardized Coefficients	T	Sig.	Collinearity Statistics
	B	Std. Error				
1 (Constant)	10,784	5,735		1,880	,063	
Compensation	,493	,112	,332	4,399	,000	,730 1,370
Discipline	,507	,112	,400	4,532	,000	,533 1,877
Motivation	,260	,108	,210	2,415	,018	,549 1,821

a. Dependent Variable: Performance

Resource : Primary Processes Data (2019)

From the data of the table above, it can be known that the requirements for passing from the multicollinearity test had been met by all the independent variables in existence, which is the value of tolerance is no less than 0,10 and VIF value (Variance Inflation Factor) no more than 10, thus it can be concluded that all the independent variables used in this research are not correlated among independent variables one with other independent variables.

The Test of T and F

The effect of compensational variable towards performance variable ($X_1 - Y$). The test of T on the motivational variable (X_3) is acquired that t_{count} is 7,729 with the significance of 0,000. Because t_{count} is bigger than t_{table} ($7,729 > 1,662$) and the significance is smaller than 5% ($0,000 < 0,05$), thus the motivational variable (X_3) partially has a positive and significant impact toward the employee performance variable (Y).

The effect of disciplinary variable towards performance variable ($X_2 - Y$). The test of T on the disciplinary variable (X_2) is acquired that t_{count} is 9,451 with the significance of 0,000. Because t_{count} is bigger than t_{table} ($9,451 > 1,66159$) and the significance is smaller than 5% ($0,000 < 0,05$), thus the disciplinary variable (X_3) partially has a positive and significant impact toward the employee performance variable (Y).

The effect of motivational variable towards performance variable ($X_3 - Y$). The effect of compensation, discipline, and motivation toward the performance ($X_1, X_2, X_3 - Y$). From the result of the calculations, it is acquired that the value of F_{count} is 49,460 with the significance of 0,000. Thus $F_{\text{count}} > F_{\text{table}}$ ($49,460 > 2,70$) and the significance is smaller than 5% ($0,000 < 0,05$). It means that the exempt variable which consists of Compensation (X_1), Disciplinary (X_2), and motivational (X_3) variable simultaneously has a positive and significant impact toward the employee performance variable (Y), like the table 4.18 above, which the value is 0,617 (R Square).

The Test of Coefficient Correlation and Determination

Based on the regression calculations using Software IBM SPSS (Statistical Program for Social Science) version 23.00 for windows, it is acquired the following result :

Table.10

The Result of Coefficient Determination (X_1, X_2 and X_3 simultaneously toward Y).

Model	R	R Square	Adjusted R Square	Std. Error of the Estimate
1	.786 ^a	.617	.605	4,478

a. Predictors: (Constant), Compensation, Discipline, Motivation

Resource : Primary Processed Data (2019)

From the table 4.28, it can be seen that the value of strong R(correlation) is 0,786 and the value of R Square (determination) in that table above is 0,617 which shows that the Y variable (employee performance) is effected by the X_1 (compensation), X_2 (discipline) and X_3 (motivation) variable simultaneously, which the value of that effect is 61,7% and the other of 38,30% is effected by other unresearched factors.

Regression Test

Based on the multiple regression calculations using *Software IBM SPSS (Statistical Program for Social Science)* version 23.00 for windows, it is acquired the following result table 11.

Table 11
The Result of Multiple Regression Test

		Coefficients ^a
Model		Unstandardized Coefficients
		B
1	(Constant)	10,784
	Compensation	,493
	Discipline	,507
	Motivation	,260

a. Dependent Variable: Performance

Resource : Primary Processed Data (2019)

From the result of calculation in the table 4.32 above, it can be presented into the regression equation as follows: $Y = 10,784 + 0,493 X_1 + 0,507 X_2 + 0,260 X_3$

The result of multiple regression equation can be seen that coefficient of regression which is gained is positive, it means that if the compensation, discipline, and motivation is increasing, thus the employee performance will increase

CONCLUSION

Based on the results of respondents' processed data about the variable of compensation, discipline, motivation and performance are as follow the Effect of Compensation towards The Employee Performance. Compensational variable (X_1) partially has a strong, positive, and significant impact towards the performance variable (Y) with the value of t_{count} (7,710) > t_{table} (1,66159) and the significance is smaller than 5% (0,000<0,05). It is acquired that the result of regression equation test is : $Y = 40,156 + 0,925 X_1$. The value of R (correlation) is 0,622 and the value of R Square (determination) is 0,387. It shows that Y variable (employee performance) is effected by the X_1 variable (compensation) which the value of that effect is 38,7% and the other of 61,30% is effected by other unresearched factors.

The Effect of Discipline towards Employee Performance. Disciplinary variable (X_2) partially has a strong, positive, and significant impact towards the performance variable (Y) with the value of t_{count} (9,451) > t_{table} (1,66159) and the significance is smaller than 5% (0,000<0,05). It is acquired that the result of regression equation test is : $Y = 24,395 + 0,885 X_2$. The value of R (correlation) is 0,698 and the value of R Square (determination) is 0,487. It shows that Y variable (employee performance) is effected by the X_2 variable (discipline) which the value of that effect is 48,70% and the other of 51,30% is effected by other unresearched factors.

The Effect of Motivation towards The Employee Performance. Motivational variable (X_3) partially has a strong, positive, and significant impact towards the performance variable (Y) with the value of t_{count} (7,729) > t_{table} (1,66159) and the significance is smaller than 5% (0,000<0,05). It is acquired that the result of regression equation test is : $Y = 32,027 + 0,772 X_3$. The value of R (correlation) is 0,623 and the value of R Square (determination) is 0,389. It

shows that Y variable (employee performance) is effected by the X3 variable (motivation) which the value of that effect is 38,90% and the other of 61,10% is effected by other unresearched factors.

The Effect of Compensation, Discipline, and Motivation toward Employee Performance In the simultaneous testing with using the F test shows that there is the highly significant impact of compensational (X1), disciplinary (X2), and motivational (X3) variable toward the performance variable (Y). It can be proven by the value of $F_{\text{count}} (49,460) > F_{\text{table}} (2,70)$ and the significance is smaller than 5% ($0,000 < 0,05$). It is acquired that the result of the multiple regression equation test is : $Y = 10,784 + 0,493 X1 + 0,507 X2 + 0,260 X3$. Based on the result of F test simultaneously is acquired also the magnitude of growth effect of compensation, discipline, and motivation toward the employee performance. With the value of R (correlation) is 0,786 and the value of R Square (determination) is 0,617. It shows that Y variable (employee performance) is effected by the X1 (compensation), X2 (discipline), and X3 (motivation) variable simultaneously, which the value of that effect is 61,70% and the other of 38,30% is effected by other unresearched factors..
