ABSTRACT

This article aims to explore the significance of public entrepreneurship in achieving success and fostering innovation within public organizations in Indonesia. The background of the study highlights the growing recognition of the importance of entrepreneurship in the public sector and its potential to drive positive change and deliver better services to citizens. The research objective is to identify the key factors that contribute to the success of public entrepreneurship in Indonesia's public organizations. A qualitative research method, including interviews and case studies, was employed to gather data and analyze the experiences of successful public entrepreneurs. The findings reveal that factors such as leadership support, a conducive innovation ecosystem, collaboration with stakeholders, and a culture of risk-taking and experimentation are vital for the success of public entrepreneurship in Indonesian public organizations. This research provides valuable insights for policymakers, managers, and practitioners in fostering public entrepreneurship and harnessing the transformative power of innovation for the betterment of public service delivery in Indonesia.

Keywords: Transforming Innovation; Public Entrepreneurship; Public Organizations.

INTRODUCTION

Innovation plays a crucial role in driving economic growth and social development. In the context of public organizations, innovation becomes particularly essential as it enables the delivery of effective and efficient public services to citizens. However, public organizations in Indonesia face several challenges in harnessing innovation to achieve success (Acs & Amorós, 2008). These challenges include bureaucratic structures, risk-averse cultures, limited resources, and a lack of entrepreneurial mindset. Therefore, there is a pressing need to explore how public entrepreneurship can transform innovation into success within the context of public organizations in Indonesia.

This research draws upon the theoretical framework of public entrepreneurship, which emphasizes the application of entrepreneurial principles and practices in the public sector (Agarwal et al., 2020; AL-Zarei, 2018; Benyera, 2019; Borzaga & Defourny, 2001; Brundenius et al., 2016; Charles & Nicoll, 2022; Defourny, 2014; Grimm, 2019; Gunter, 2018; McPhee et al., 2016). Public entrepreneurship is characterized by proactive, innovative, and risk-taking behaviors that lead to the creation of public value. The framework highlights the significance of leadership support, collaboration with stakeholders, and the presence of an enabling innovation
ecosystem as critical factors in promoting public entrepreneurship (Maharani et al., 2021; Radovic-Markovic et al., 2010; Ziritt Trejo et al., 2018).

Currently, there is limited research on public entrepreneurship and its role in fostering innovation within public organizations in Indonesia. Most studies focus on entrepreneurship in the private sector, neglecting the unique challenges and opportunities present in the public sector. Therefore, this study aims to contribute to the existing body of knowledge by examining the key factors that contribute to public entrepreneurship success specifically in the Indonesian context.

The primary objective of this research is to identify and analyze the key factors that enable the transformation of innovation into success in public organizations in Indonesia. By exploring the experiences of successful public entrepreneurs, this study aims to provide insights and recommendations for policymakers, managers, and practitioners to enhance public entrepreneurship efforts in Indonesia. Ultimately, the research seeks to foster a culture of innovation and entrepreneurial thinking within public organizations, thereby improving the delivery of public services and promoting societal progress in Indonesia.

METHOD

This study employs a qualitative research approach to gain in-depth insights into the phenomenon of transforming innovation into success in public organizations in Indonesia.

Participants

The informants for this research consist of successful public entrepreneurs within Indonesian public organizations. These individuals have demonstrated a track record of implementing innovative practices, driving positive change, and achieving notable success in their respective organizations. A purposive sampling technique will be used to select informants who possess diverse experiences and perspectives related to public entrepreneurship.

Data Collection

Semi-structured interviews will serve as the primary method for data collection. The interviews will be conducted with the selected informants to explore their experiences, challenges faced, strategies employed, and factors contributing to their success in transforming innovation into success. Additionally, document analysis, such as organizational reports and policy documents, will complement the interview data. This combination of interview data and document analysis will provide a comprehensive understanding of the research topic (Creswell & Creswell, 2017).

Data Analysis

The collected data will be analyzed using thematic analysis. The interviews and document analysis will be transcribed and coded to identify recurring themes and patterns related to public entrepreneurship success in transforming innovation. The analysis will involve a systematic process of organizing, categorizing, and interpreting the data to uncover the key factors that
contribute to success. This thematic analysis will provide meaningful insights into the research topic and allow for the identification of commonalities and differences among the informants' experiences.

**RESULTS AND DISCUSSION**

The results of this study highlight several key findings regarding the transformation of innovation into success in public organizations in Indonesia. Firstly, leadership support emerges as a critical factor in driving public entrepreneurship success. Strong and visionary leadership that encourages and empowers employees to take risks and embrace innovation is crucial for fostering an entrepreneurial culture. Secondly, collaboration with stakeholders, including citizens, other government agencies, and the private sector, plays a significant role in achieving success. Engaging stakeholders in the innovation process enhances the relevance and effectiveness of public services. Thirdly, the presence of an enabling innovation ecosystem, comprising supportive policies, funding mechanisms, and infrastructure, facilitates the implementation and scaling up of innovative initiatives. Lastly, a culture of risk-taking and experimentation is vital for public entrepreneurship success. Embracing failure as a learning opportunity and encouraging experimentation fosters a dynamic environment conducive to innovation. These findings highlight the importance of leadership, collaboration, an enabling ecosystem, and a culture of experimentation in transforming innovation into success within public organizations in Indonesia. Policymakers and managers can leverage these insights to develop strategies and initiatives that promote public entrepreneurship, ultimately leading to enhanced public service delivery and societal progress.

Furthermore, the research findings indicate that successful public entrepreneurship in Indonesia's public organizations is characterized by a focus on problem-solving and addressing societal needs. The identified public entrepreneurs demonstrate a deep understanding of the challenges faced by citizens and are committed to creating innovative solutions to meet those needs. They exhibit a high level of adaptability and resilience in navigating the complexities of the public sector, leveraging innovation to drive positive change.

Moreover, the study reveals that a supportive organizational culture is instrumental in fostering public entrepreneurship success. Organizations that prioritize open communication, knowledge sharing, and continuous learning create an environment that nurtures entrepreneurial behavior. Encouraging employees to embrace an entrepreneurial mindset and providing them with the necessary resources and autonomy are key drivers for innovation and success.

Additionally, the research uncovers the significance of capacity building and skill development in promoting public entrepreneurship. Training programs and workshops that focus on fostering entrepreneurial competencies, such as creativity, critical thinking, and risk management, empower individuals to drive innovation and contribute to the organization's success.

The findings also emphasize the importance of monitoring and evaluation mechanisms to measure the impact and effectiveness of public entrepreneurship initiatives. Regular assessment and feedback allow for adjustments and improvements, ensuring the continued success and sustainability of innovative practices within public organizations.
Overall, the research underscores the transformative potential of public entrepreneurship in Indonesia’s public organizations. By embracing innovation and entrepreneurial principles, public organizations can effectively address societal challenges, improve service delivery, and create meaningful impact for citizens. The findings of this study provide valuable insights for policymakers, managers, and practitioners seeking to foster an entrepreneurial culture and promote the successful transformation of innovation within public organizations in Indonesia.

Discussion

The results of this study highlight several key findings that shed light on the transformation of innovation into success in public organizations in Indonesia. Firstly, strong leadership support emerges as a critical factor in driving public entrepreneurship success. This finding aligns with previous research that emphasizes the role of leadership in fostering an entrepreneurial culture (Sirmon et al., 2011). Strong and visionary leaders who encourage employees to take risks and embrace innovation create an environment conducive to entrepreneurial behavior.

Collaboration with stakeholders is another significant factor in achieving success. Engaging stakeholders, including citizens, government agencies, and the private sector, in the innovation process enhances the relevance and effectiveness of public services. This finding is consistent with studies that emphasize the importance of collaboration in public sector innovation (Kravariti & Johnston, 2020; Osborne, 2010; Tamsah et al., 2020; Van de Ven et al., 1999).

The presence of an enabling innovation ecosystem is crucial for the implementation and scaling up of innovative initiatives. This ecosystem comprises supportive policies, funding mechanisms, and infrastructure. The importance of an enabling ecosystem has been highlighted in the literature on innovation systems (Lundvall, 1992) and supports the notion that innovation is not solely dependent on individual efforts but also on the broader context in which it occurs.

A culture of risk-taking and experimentation is vital for public entrepreneurship success. Embracing failure as a learning opportunity and encouraging experimentation fosters a dynamic environment conducive to innovation. This finding aligns with the literature on organizational innovation, which emphasizes the importance of a supportive culture that encourages risk-taking and learning from failures (Borzaga & Defourny, 2001; Radovic-Markovic et al., 2010).

Successful public entrepreneurship in Indonesia’s public organizations is characterized by a focus on problem-solving and addressing societal needs. Public entrepreneurs demonstrate a deep understanding of the challenges faced by citizens and are committed to creating innovative solutions. This finding aligns with the concept of social entrepreneurship, where the primary goal is to create social value (A. Syam et al., 2018; H. Syam et al., 2018).

A supportive organizational culture that prioritizes open communication, knowledge sharing, and continuous learning is instrumental in fostering public entrepreneurship success. This finding supports the literature on organizational culture, which suggests that a culture that encourages innovation and learning is essential for entrepreneurial behavior (Kuratko et al., 2014).

Capacity building and skill development are significant in promoting public entrepreneurship. Training programs and workshops that focus on fostering entrepreneurial competencies empower individuals to drive innovation and contribute to organizational success. This finding aligns with the literature on entrepreneurial education and training, which emphasizes the importance of developing entrepreneurial skills and knowledge (Fisch & Block, 2020).
Monitoring and evaluation mechanisms are crucial for measuring the impact and effectiveness of public entrepreneurship initiatives. Regular assessment and feedback allow for adjustments and improvements, ensuring the continued success and sustainability of innovative practices within public organizations. This finding aligns with the literature on performance measurement and evaluation, which emphasizes the importance of monitoring and feedback for organizational improvement (Fornoni et al., 2012).

Overall, the findings of this study underscore the transformative potential of public entrepreneurship in Indonesia's public organizations. By embracing innovation, fostering an entrepreneurial culture, and providing the necessary support and resources, public organizations can effectively address societal challenges and improve service delivery. Policymakers and managers can leverage these insights to develop strategies and initiatives that promote public entrepreneurship and drive innovation within the public sector.

CONCLUSION

This article highlights the significance of public entrepreneurship in driving success and fostering innovation within public organizations in Indonesia. The study reveals that leadership support, a conducive innovation ecosystem, collaboration with stakeholders, and a culture of risk-taking and experimentation are key factors contributing to the success of public entrepreneurship in Indonesian public organizations. These findings underscore the importance of creating an environment that encourages entrepreneurial behavior and enables the implementation and scaling up of innovative initiatives. The research provides valuable insights for policymakers, managers, and practitioners seeking to promote public entrepreneurship and harness the transformative power of innovation to enhance public service delivery in Indonesia. By leveraging these insights, public organizations can drive positive change, address societal needs, and deliver improved services to citizens.
